Optimal cable and tube management

Repositioning and/or moving patients who are attached to various cables, tubes, catheters, etc. can lead to confusion. TransFix ensures an optimal cable and tube management. The soft, extra wide cuff has enough space for the well-ordered fixation of e.g. single-use pressure transducers, EKG cables and tubes on the extremities of patients of all ages using three separate Velcro fasteners.

The one-size-fits-all cuff is made from a hypoallergenic and breathable foam material.

Order options

Product	Shipping unit	Order No.
TransFix	25 pieces	HSOTRFIX4000

HOW TO USE

1

Placement & positioning

TIP

Place the cuffs on the patient's extremities and choose the position of the Velcro fixation individually and flexibly depending on your needs.
